

Jeffers Petroglyphs Wind Scale

To make the Jeffers Petroglyphs Wind Scale, simply cut out the circles on both pages. Cut out the gray areas on page one, punch a hole in the middle of each circle on the black dot, and put them together using a brass fastener. To use the wind scale, simply turn the dial until you see what is happening (smoke drifting, trees breaking, or whatever it may be) and it will show you how strong the wind is blowing.
